

Should flu shots be given to everyone at risk? We think so.

Public health research shows that for every 250 flu shots given to people at risk of complications from the flu, one life is saved. And last year Aurora Health Care's Visiting Nurse Association of Wisconsin gave over 90,000 flu shots to people throughout eastern Wisconsin. Many at high risk. And some just wanting to avoid the setback and time loss from being sick. It's all part of our Shoo the Flu & *Pneumonia Too* program. Keeping people on the job, in school and feeling healthy all winter long.

And the best part is you don't have to make an appointment. The program gives vaccinations in schools, in malls, grocery stores, pharmacies, manufacturing plants, office buildings and church basements...just about any place people gather (over 450 locations last year alone). It seems like a little thing, but chances are pretty good that one of the 90,000 flu shots given last year helped someone close to you stay healthy and well.

So get your flu shot. It's convenient. And it could save your life or the life of someone you love. For a list of times and locations, visit us online at www.AuroraHealthCare.org or call 1-866-4HEALTH.
