

PGY1 Pharmacy Residency – Aurora Medical Center Grafton

Jordan Weber

Previous Education: PharmD from Medical College of Wisconsin School of Pharmacy

Short Bio: I'm originally from Oconomowoc, Wisconsin and have always felt a strong connection to healthcare within a community. I completed my undergraduate degree at Carroll University through a 3+3 accelerated program in partnership with MCW. In my free time, I enjoy reading, traveling, and spending time outdoors exploring nature.

Factors Considered Most Important When Choosing Residency: When selecting a residency program, I was looking for a hospital environment that felt close-knit and collaborative where I could build strong relationships with all healthcare teammates. It was also important to me to find a program where I could make a meaningful impact in a smaller community, contributing to patient care in a more personal and direct way.

Why Aurora? Aurora has been a familiar part of my life since I was young, and its reputation for compassionate, community-focused care made it an ideal choice for my residency. The opportunity to collaborate and connect with patients is something I thought about when choosing Aurora.

Current rotations: General Medicine, Administration, Critical Care, Medication Safety, Surgery, Cardiology, Infectious Disease, and Drug Use Policy

Additional experiences: Clinical Forum/ACPE-accredited educational seminar, Staffing

Year-long project: Cost Analysis of Dose Rounding of Human Rabies Immunoglobulin in the Emergency Department Within a Multi-State Healthcare System.

Future: Begin my career as a clinical pharmacist in a community-based hospital.

Linden Young

Previous Education: BS in Human Biology from University of Wisconsin-Green Bay, PharmD from Concordia University Wisconsin

Short Bio: I am originally from Brandon, Wisconsin, but have bounced around Wisconsin while attending UW Green Bay and Concordia University Wisconsin. In my free time I enjoy camping, watching the Brewers and Packers, and spending time with friends/family.

Factors Considered Most Important When Choosing Residency: The most important considerations for me were work-life balance, positive culture within the pharmacy, and rotation experiences.

Why Aurora? I have worked for Aurora for about 6 years and have had wonderful experiences throughout my employment. Everyone that I have worked with has always been so helpful in progressing my learning while working as a technician/intern during pharmacy school. During my interviews, everyone was so friendly, welcoming, and supportive, which confirmed that I wanted to continue within the Aurora system.

Current rotations: Cardiology, General Medicine, Surgery, Infectious Disease, Critical Care, Administration/Drug Use Policy

Additional experiences: Clinical Forum/ACPE-accredited educational seminar, Staffing

Year-long project: Optimization and Expansion of Pharmacist Services at an Ambulatory Heart Failure Clinic

Future: I hope to start my career as a clinical pharmacist.
