Aurora Health Care's Minimally-Invasive Gynecologic Surgery Program features state-of-the-art treatment options for a wide scope of female health concerns. In regards to the field of gynecology, minimally-invasive surgery can be a viable treatment option for:

• General gynecologic surgery:
  – Fibroids
  – Heavy periods/abnormal uterine bleeding
  – Ovarian cysts
  – Endometriosis
  – Hysterectomy

• Family planning/permanent birth control
  – Fertility
  – Pelvic floor and incontinence treatment
  – Gynecologic cancer

To find a physician that is right for you or to get more information about minimally-invasive gynecologic surgery, please call toll-free 855-800-MIGS (6447) or visit www.Aurora.org/GynSurgery.

If you are facing a cancer diagnosis, please contact us at 1-888-863-5502 or visit www.Aurora.org/CancerCare.

Do you need surgery for...

• ovarian cysts
• fibroids
• incontinence
• family planning
• abnormal uterine bleeding
• fertility
• or other gynecologic problems?
Explore Minimally-Invasive Options to get you back to your life sooner.

Facing a hysterectomy or a gynecologic procedure can be concerning for any woman. If you have been told that you need to have surgery, the first thing to do is STOP – and take time to consider your options.

More choices are available today than ever before that improve recovery, minimize time off and reduce pain and complications. Minimally-invasive treatment options provide women a quicker return to what matters most in their lives.

What is Minimally-Invasive Gynecologic Surgery?

Many women facing traditional gynecologic surgery also are candidates for vaginal, laparoscopic and robotic procedures using technologies like the da Vinci Surgery System®.

The Minimally-Invasive Surgery Program at Aurora Health Care provides a treatment option for a variety of female health concerns from ovarian cysts, fibroids and infertility to incontinence and abnormal uterine bleeding. It also provides an alternative for women seeking permanent birth control.

Patient benefits

Using minimally-invasive surgery techniques, we offer patients many benefits over traditional surgeries. They include:

Less Pain
Minimally-invasive procedures result in less post-operative pain and discomfort.

Shorter Hospital Stay
Shorter hospital stay and quicker return to normal activities. Patients who undergo minimally-invasive procedures are usually able to go home sooner. And, in many cases, the patient is able to return to normal activities more quickly.

Less Scarring
Minimally-invasive procedures require smaller incisions – which means smaller, less noticeable scars. The scars that do form typically have a less jagged edge – giving them a better appearance.

Less Injury to Tissue
Most traditional surgeries require a long incision. This incision usually has to be made through muscle. Muscle needs a significant time to heal after surgery. Because there are no long incisions, there is less tissue damage and quicker recovery.

Higher Accuracy Rate
When doctors use video-assisted equipment, there is better visualization and magnification of internal organs and structure. For patients, this translates into a more accurate and definitive procedure.

Setting our program apart

At Aurora Health Care, our Minimally-Invasive Gynecologic Surgery Program features the vast experience of leading surgeons who are dedicated to presenting all options to their patients.

Before and after your procedure, we offer a multidisciplinary approach to maintaining your health, which includes access to specialists for:

- Pelvic floor rehabilitation
- Sexual health
- Wellness programs
- Behavioral health
