Community health improvement is an effective tool for creating a shared vision and supporting a planned and integrated approach to improving health outcomes. The basic premise of community health improvement is that entities identify community health issues, prioritize those that can be addressed, and then develop, implement, and evaluate strategies to address those issues. Tax-exempt hospitals are required to conduct a community health needs assessment (CHNA) and develop an implementation strategy to document how the hospital will address prioritized community health needs. The following outlines a summary of the CHNA process and provides details on Aurora St. Luke’s South Shore plans to address their prioritized community health needs.

**SUMMARY OF CHNA PROCESS**

Every three years, the health system members of the Milwaukee Health Care Partnership (Advocate Aurora Health, Ascension Wisconsin, Children’s Wisconsin, and Froedtert Health) conduct a collaborative Community Health Need Assessment (CHNA) in Milwaukee County. The CHNA serves as the foundation from which hospitals and local health departments develop their respective community health improvement strategies. These findings are also intended to inform a broader audience — community health centers, government health agencies, public health departments, philanthropy, community-based organizations, and civic leaders — about the top health issues facing our community.

**The Milwaukee County CHNA relies on three sources of information:**

- **Community Health Survey (primary data):** an on-line survey conducted August – October 2021, with more than 8,600 Milwaukee County residents completing 50 questions related to the top health needs in the community, individuals’ perception of their overall health, access to health services, and social drivers of health, including racism and health equity.

- **Stakeholder Interviews and Focus Groups (primary data):** conducted by health system community benefit leaders with 103 individuals representing 93 organizations to identify the community’s most pressing health issues and effective health improvement strategies. The focus groups were selected to assure input from organizations representing vulnerable populations and those with expertise in community health. The groups included leaders and representatives from Safety Net clinics, local community health departments, youth serving organizations, and organizations serving low-income populations.

- **Health Compass Milwaukee (secondary data):** a dynamic website providing more than 300 of the most current health indicators for Milwaukee County at the county, municipal, zip code, and census tract levels (where available), as well as related demographic data such as race/ethnicity, education, income, and housing. [healthcompassmilwaukee.org](http://healthcompassmilwaukee.org)

This report along with additional Milwaukee County CHNA materials can be found on [Health Compass Milwaukee in the Local Reports section.](http://healthcompassmilwaukee.org)
SIGNIFICANT HEALTH NEEDS IDENTIFIED AND SELECTED FOR IMPLEMENTATION STRATEGY AND WHY

Advocate Aurora Health has a strong history of community engagement and service. A targeted strategy was developed to build on this history—one that transforms and aligns our community-facing work through a health equity lens. Health equity means everyone has a fair and just opportunity to be as healthy as possible. The Advocate Aurora Health Community Strategy provides an overarching framework for the health system centered on six areas of focus which include: access to innovative care; access to behavioral health; workforce development; community safety; housing; and food security. The Aurora South Shore Community Health Implementation Strategy aligns with the Advocate Aurora Community Strategy, but this plan is unique to the health needs of the community served by Aurora South Shore. Aurora South Shore prioritized the following health issues to be addressed with their 2023-2025 Community Health Implementation Strategy:

- Access to Innovative Care and Services
- Behavioral Health: Mental Health and Substance Use
- Workforce Development
- Living Well: Injury Prevention in Older Adults

Access to Innovative Care and Services

Access to health care was a top health issue identified in the Aurora South Shore Community Health Needs Assessment. Key stakeholder and survey respondent data call out that access to care is more comprehensive than just being seen by a health care provider. For this strategy, Access to Innovative Care and Services is about creating conditions in our hospital, across our health system and in our community to provide accessible, available, affordable, and targeted health care and health services to support everyone’s ability to live well.

Data for Milwaukee County shows the county falls behind Wisconsin and other counties for adults without health insurance, no recent dental visits, and clinical care ranking (for access and quality as reported in the County Health Rankings). Additionally, many of these indicators are seeing significantly worsening trends. In Milwaukee, significant gaps exist in health care coverage between racial/ethnic groups.

Behavioral Health: Mental Health and Substance Use

Behavioral health, which includes treatment and services for mental health conditions and substance use disorder, is a growing public health concern and was identified as a top health issue in the Aurora South Shore Community Health Needs Assessment. In 2021, the mental health hospitalization rate in Milwaukee County was 852.1 admissions per 100,000 residents, higher than the Wisconsin average of 650.8 per 100,000 residents. The 2021 mental health emergency department visit rate was 1,353.4 visits per 100,000 residents, higher than the Wisconsin average of 919.8 residents. Non-Hispanic Black residents were disproportionately impacted, with a rate of 2,647.5 visits per 100,000 residents.

In Milwaukee County, the rate of drug overdose mortality was 41.7 per 100,000 population in 2016-2020, higher than Wisconsin rate of 21.7 per 100,000 population. From 2017-2021, the Milwaukee County substance use emergency department visit rate was 1,138.6 visits per 100,000 residents, higher than the Wisconsin average of 649.3 visits per 100,000 residents. Non-Hispanic Black residents were disproportionately impacted, with a rate of 1,715.9 visits per 100,000 residents.
Workforce Development

A steady job in favorable working conditions means more than just a paycheck. Employment can also mean a link to health insurance benefits for a family, the ability to pay for childcare services or education, and the opportunity to purchase healthy, nutritious food. Unemployment, on the other hand, can lead to negative health outcomes such as a decline in one's ability to access care for themselves or their family members, development of depression or other behavioral health issues, or an inability to pay for basic living expenses. Employment can also affect health if one's working conditions are unsafe or if wages are not at a level that sustains one's living expenses.

The median household income in Milwaukee County is $55,078, which is lower than the state's median household income of $66,706. There is a large racial disparity in the median household income with the non-Hispanic White and Asian or Pacific Islander populations having the highest household incomes and the non-Hispanic Black, Native American and Hispanic or Latino populations having the lowest median household incomes.

Living Well: Injury Prevention in Older Adults

The socioeconomic and environmental conditions where people live, work, learn, play and pray have a direct impact on a wide range of health and quality of life outcomes. Living well is the aspirational goal we have when communities address targeted, yet critical community health needs. In the Aurora South Shore Community Health Needs Assessment, the community identified several conditions that need to be addressed to achieve living well, including injury prevention and safety in older adults.
HEALTH PRIORITY: Access to Innovative Care and Services

IMPACT:
Improve health among residents by creating conditions that provide accessible, available, affordable, and targeted health care and health services to support everyone’s ability to live well

DESCRIPTION OF HEALTH NEED DATA:
• Nineteen percent of Milwaukee County residents reported an inability to access health services in the last 12 months
• Twenty-three percent of South Milwaukee/St. Francis residents reported an inability to access health services in the last 12 months
• Twenty-two percent of Cudahy residents reported an inability to access health services in the last 12 months

Source: Milwaukee Community Health Survey, 2021

• The overall rate of insured residents in Milwaukee County 89.2 percent. The highest rate of insured residents is among the white non-Hispanic population (95.4 percent), and the lowest is among the Hispanic/Latino population (70.0 percent)

American Community Survey, 2019

• The rate of preventable emergency department visits for the South Milwaukee municipal region* is 2,212.0 visits per 100,000 residents, but the rate is higher for the non-Hispanic Black population at 8,258.0 visits per 100,000 residents

Source: Wisconsin Health Association Information Center, 2017-2021

*South Milwaukee municipal region is defined as South Milwaukee, St. Francis, Cudahy and Oak Creek
